*Quattro Windsurfing*

# Range

2020 / 2021

The world is already complex enough. Why make the choice any harder, when it comes to something we love so much. All good things come in threes. That's the only status quo our wave boards won't challenge.

All Quatro Windsurfing boards share the same outstanding build. Ultimately light for the strength, drive and flex they deliver. The 2020 / 2021 range is the blend of our core quality and motivation.

Our unquenchable thirst and responsibility for being at the forefront of the future, blended with a quarter of a century worth of experience. Water experience, not just desk experience. The lines we draw into pixels and onto foam always and only have one goal, the new lines they empower us to draw into the oceans.

PRO

New

1 Year Warranty

## Pyramid Pro Surfwave Thruster

Pro Carbon Monocoque Construction.

Available in 72, 77, 82, 87, 92 liters.

US center and Mini Tuttle side finboxes.

3 MFC Footstraps.

Neon salmon red.

New

1 Year Warranty

## Cube Pro Powerwave Quad

Pro Carbon Monocoque Construction.

Available in 75, 82, 87, 93, 98, 106 liters.

Short US center and Mini Tuttle side finboxes.

3 MFC Footstraps.

Neon lime yellow.

New

1 Year Warranty

## Power Pro Freewave Thruster

Pro Carbon Monocoque Construction.

Available in 86, 94, 105, 115 liters.

Powerbox center and Mini Tuttle side finboxes.

4 MFC Footstraps.

Neon lagoon blue.

Please reference the renderings for accurate looks.

PRO

Surfwave Thruster

Keith Teboul: "The all new launching Pyramid Pro is something I am very proud of. I wanted to come up with a new bottom concept that would incorporate the best elements of concave and vee together, allowing for the fastest possible flow of water in a wave board. What I created is a mix of both, one that I call Con-Vee.

Basically the front of the board has a full single concave, running into a vee through the stance, inside that concave. Off the tail then, the board has a full vee.

This bottom bestows the shape with insane quick planing, boosted top end speed and longer, smoother glides when coming off a plane. As a result of this bottom, a stronger double concave is put closer to the rail, allowing for much more grip and thrust through your turns. Something you won't want to go without, once experienced."

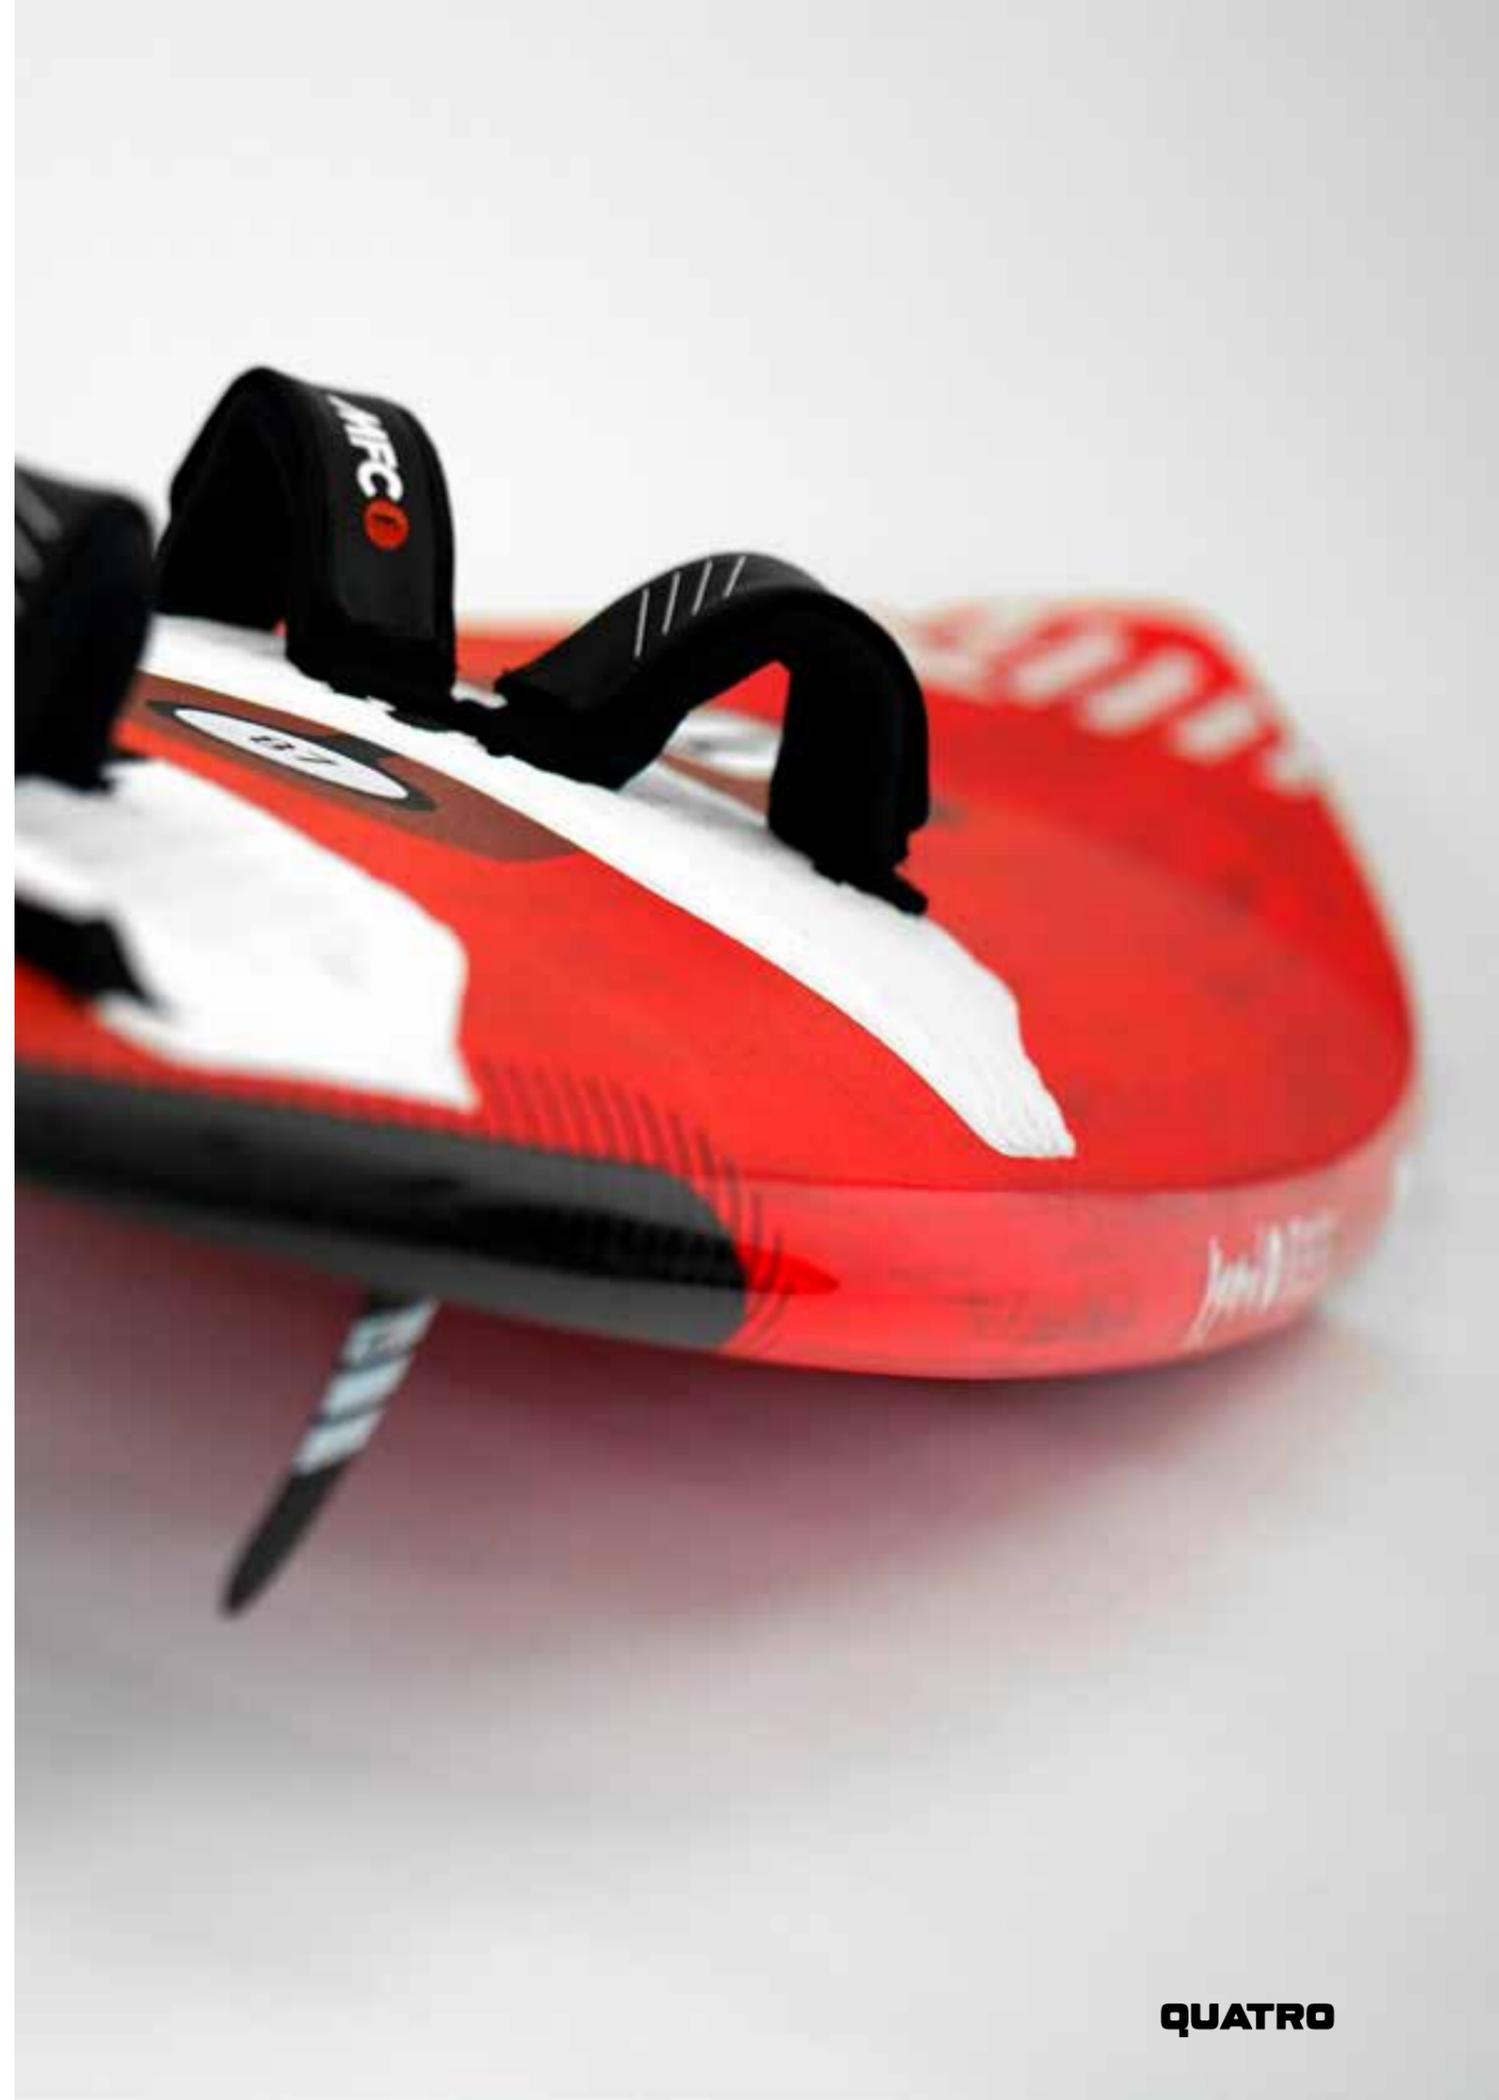

"The outline on the Pyramid Pro has changed as a result of the bottom, with a slightly fuller nose and a bit more parallel line throughout, allowing the bottom shape, rocker and outline to all work in synergy and more as a whole. Mega fast, turny, grippy and drivey, the qualities that any progressive wave board must be measured by, are delivered in the most uncluttered of ways in the Pyramid Pro."

# PRO Customized Carbon

## Construction

Pyramid Pro, Cube Pro, Power Pro

### Biaxial Carbon

Ultra Light & Ultra Strong  
Full Stance Monocoque

Extensive patches of biaxial carbon connect the peak loads of your feet to the rest of the deck, evenly distributing the forces resulting from jumping and wavering.

### Wood

Very Light & Super Strong  
Heel Shocks

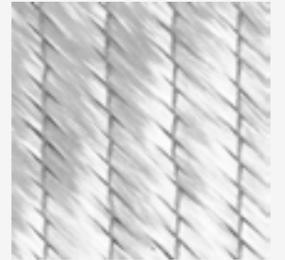

Generous patches of biaxial glass reinforced wood sandwich shock absorbers under your heels.

### Biaxial Glass

Very Light & Super Strong  
Direct Flex Monocoque™

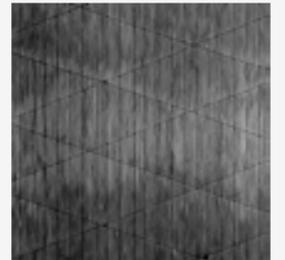

The Direct Flex Monocoque connects your stance to the masttrack and distributes peak loads to the rest of the board, allowing for our boards to be both lighter and more rigid than traditional wave board constructions.

### Unidirectional Carbon

Ultra Light & Ultra Strong  
Core Axis Reinforcement

This long and wide carbon patch acts as a superior backbone, making you board stiffer and eliminating distortions.

### HYPER SKIN HD

Technology

**High Density Sandwich**  
Hyper Light & Hyper Strong  
360° Board Coverage

Hyper Skin HD is our proprietary closed cell sandwich, delivering an immensely rigid structure at an extremely light weight. Covering deck, rails and bottom in it, gives our Pro boards their incomparable flex and longevity. A third stronger, stiffer and lighter than conventional boards.

### FUSED CELL CORE

Technology

**EPS**  
Super Light & Super Strong  
Core

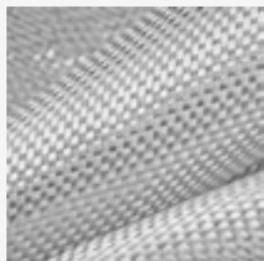

Fused Cell Expanded Polystyrene is a high quality, low weight, rigid, closed cell foam used in advanced modern production boardmaking.

### S-Glass

Super Light & Super Strong  
Rail Bands

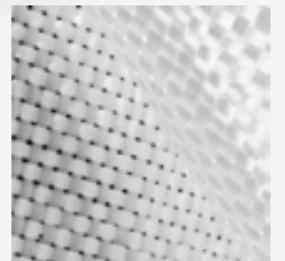

Protecting the rails of your board on the water and on land.

### Triple Glass

Very Light & Very Strong  
Nose Impact Protection

Keeping the nose of your board safe from harm, yet light.

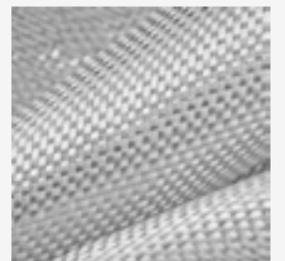

### FULL S GLASS HULL

Technology

**S-Glass**  
Super Light & Super Strong  
360° Board Coverage

S-Glass provides higher strength and elasticity compared to standard glass, while maintaining more flex than carbon. Flex is a super important secret to an outstanding Wave board. A full Carbon Wave board would be too stiff to deliver the agility required by radical modern wavesailing. We use a highest quality full S-Glass hull in combination with a full Carbon stance monocoque.

# Cube

PRO

Powerwave Quad

Keith Teboul: "For the Cube Pro's all new latest generation I worked on putting as much emphasis on early planing as possible, giving you every single bit of boost you might want at any moment. It's like a turbo that's constantly spooled up.

I'm keeping this powerful board stable with a fuller, more parallel outline, aiding to keep your speed when bottom turning and backside riding in side to side onshore conditions, where turns toward the lip are longer, drawn out, and require more stamina than in side shore locations.

A full vee bottom with double concaves manifests itself in ultra quick planing and sharp grip in any turn, wide or tight.

I am giving the Cube Pro a Diamond Squash tail for stability and support, as well as to add some comfort along with the intense acceleration this board delivers"

# Cube

PRO

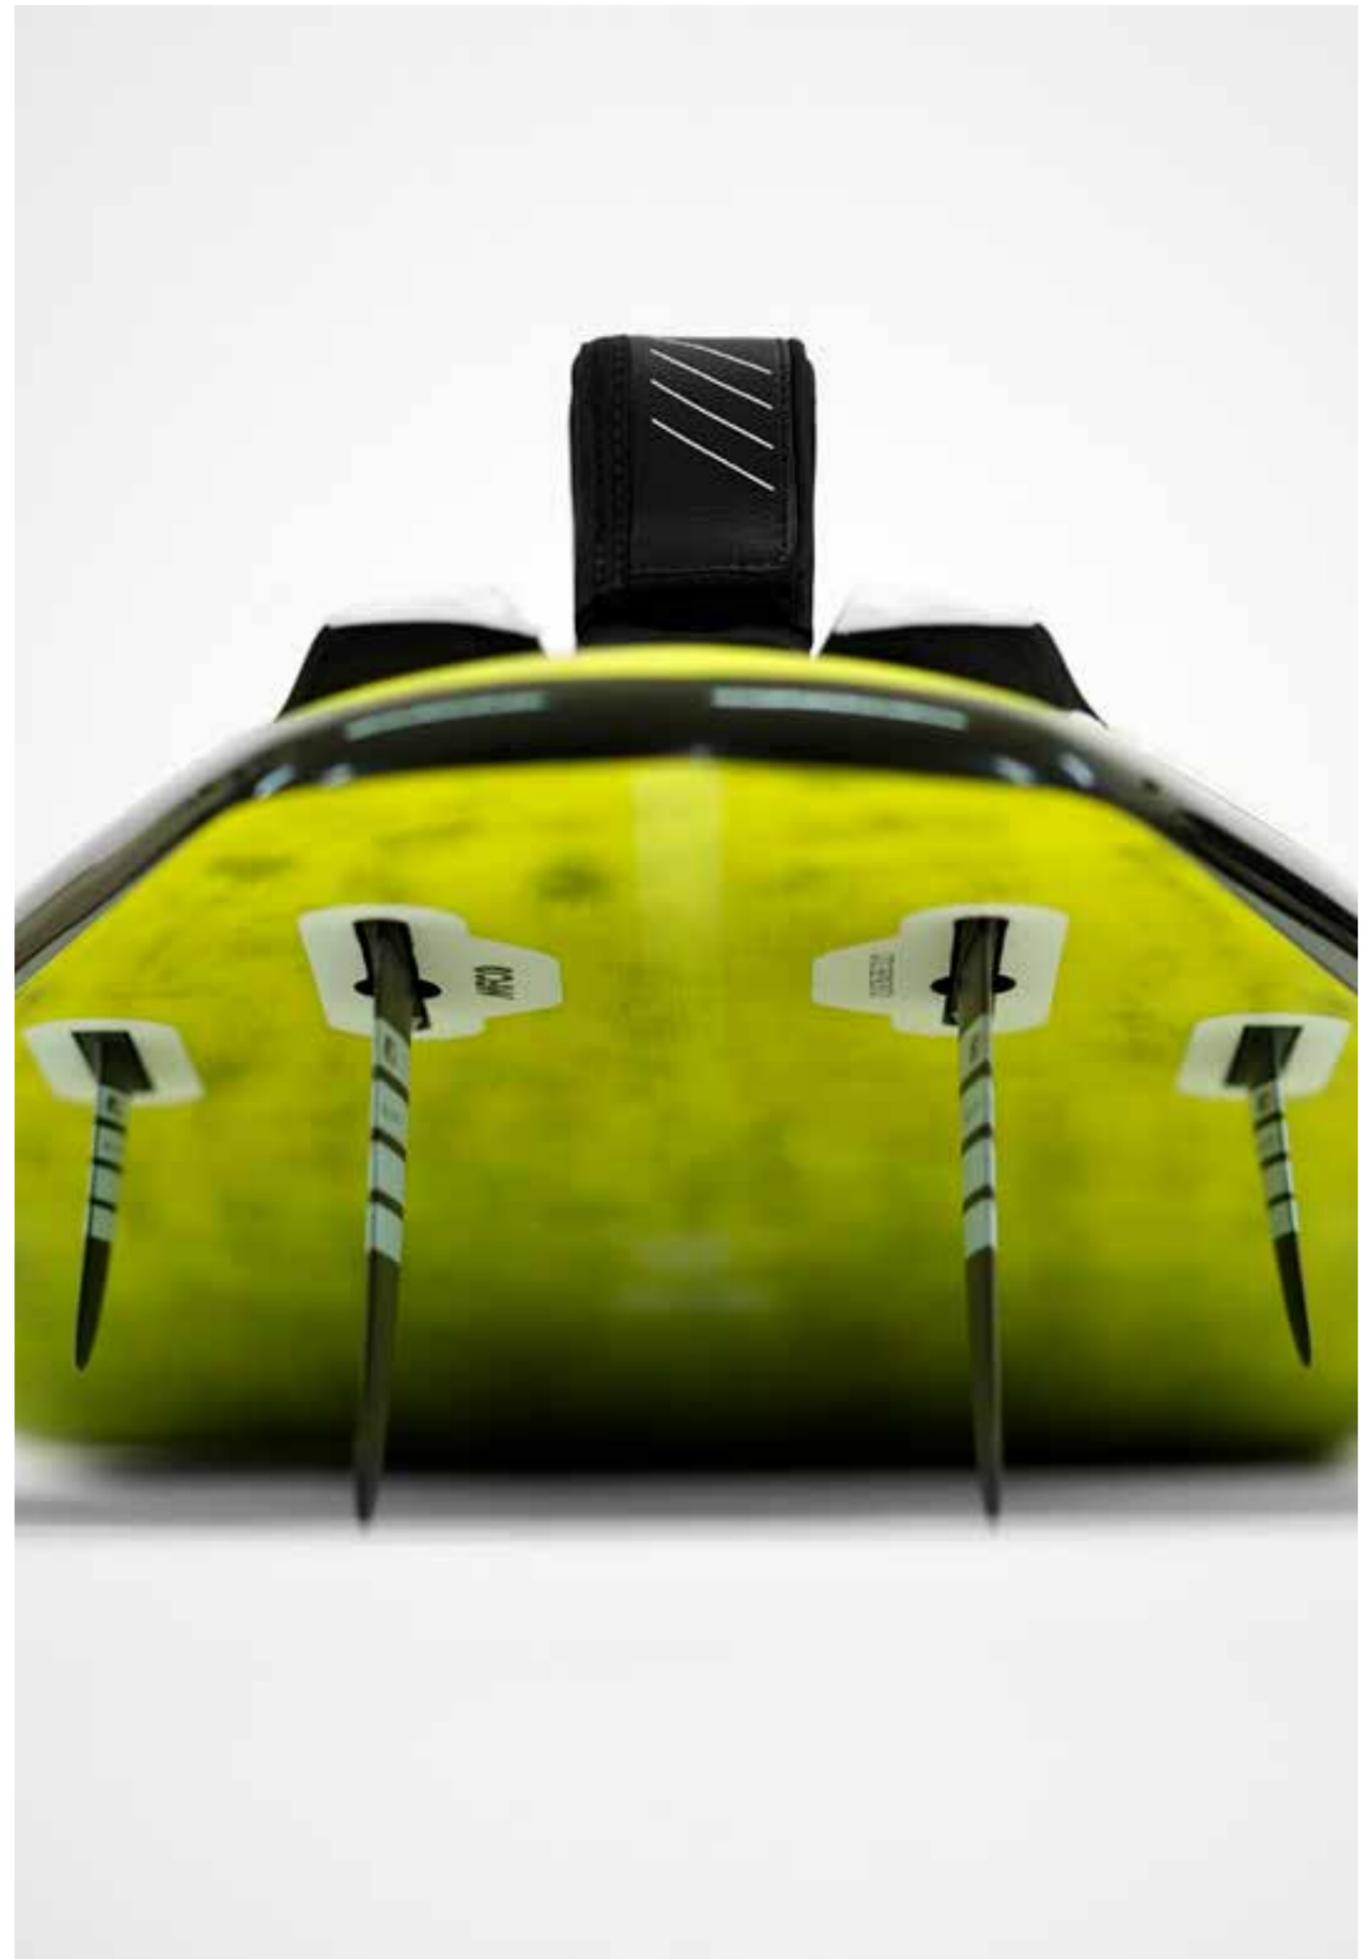

Powerwave Quad

"The super refined quad setup provides grip in any section of the wave and at any angle you put the board into. It's your ticket to snappy turns in small waves and your safety net in big waves, when the slightest chop could otherwise throw you off."

# Power

PRO

Freewave Thruster

Keith Teboul: "The all new Power Pro sports the fastest tail rocker in the new range, milking that extra bit of naturally aspirated early planing and fast glide over the other boards. While the Power Pro is still super agile, you'll notice right away that it's easier to reach your proper position in the wave fast enough. You'll be there in time, instead of wishing you were."

The bottom is a full vee with double concaves for a sweet blend of maximum speed and the most comfort. A fuller, more parallel outline has been incorporated for increased stability and drive through your turns and jibes. The Power Pro is fast paced and comfortable, the most stable ride of all Quatro Windsurfing boards."

# Power

PRO

*Freewave Thruster*

"But don't be mistaken, this board can throw spray and lay maneuvers into the water that would have been reserved to pure wave boards or freestyle boards until not long ago. Fully modern and fully inspired by its more radical siblings.

The Power Pro features both inboard and outboard stance positions for comfort and different skill levels"

QUATRO

# Custom World™

A custom board is the supreme choice for a rider who needs a product tailored to their uncompromised needs.

We are committed to building, riding and selling boards right where it's all at, in Hawaii. All Quatro Windsurfing production boards are based on prototypes built in Haiku, on Maui. Naturally such dedication translates into the ultimate quality of boards we manufacture. Our heritage goes back as far as 1994 and we're hungry for new shapes every day.
